

**Re: Rick and Mike this is the EPA's response to our technology
Please send this on.**

Hi John, I will pass this on to Dennis. Thanks Mike

In a message dated 3/20/2008 10:45:59 A.M. Central Daylight Time,

This is a Senior environmental Scientist I was introduced to by the Chief of the Air Branch.

The Chief is a personal friend and I talked personally with Russell yesterday.
John

I have examined the web site www.preignitioncc.com/car. This is what we would refer to as an aftermarket retrofit device and does not require certification.

EPA has a voluntary evaluation program for such products, but applicants must pay for all testing involved.

Details on the program can be found at:

www.epa.gov/otaq/consumer/b00003.pdf

Test laboratories recognized as having the capability to conduct EPA test protocols (the only acceptable tests) may be found at:

www.epa.gov/otaq/consumer/lablist.pdf

Although some one hundred products have been evaluated in the history of the program, none has demonstrated a fuel economy benefit without increasing emissions.

If you care to review reports (there are several that are based on magnetism), see:
www.epa.gov/otaq/consumer/reports.htm
